

## Let's work ...

## ... LIGHTster !

LIGHTster with its three different profiles offer a multitude of purposes as required by the circumstances and conditions on site. Single as well as double girder versions in standard or low headroom are possible and also monorail solutions can be realised with LIGHTster.

The systems can be designed as manually operated push cranes or motorised cranes. The narrow nylon wheels on the galvanised manual trolleys allow an easy and quiet moving during operation.

Simple but robust profile joints as well as few necessary fixing points make the mounting on site easier and more effective. The components that arrive pre-sorted, make a quick overview and sorting of the parts possible.

LIGHTster optimizes the time and manpower requirements.

## Look ahead!
