# DATAHUB

A custom-designed software system that provides you with 24/7 access to vital lifting equipment data

Exclusive to Granada Material Handling

# The thinking behind DATAHUB

As part of our policy of staying at the very forefront of technological change and management efficiency, we have worked with market-leading software partner companies to develop a new software system designed to meet the specific needs of lifting equipment management. Throughout this project our over-riding objective was to provide our clients with quicker, simpler, more efficient access to vital lifting equipment data.

**DATAHUB** goes further than any other software to streamline complex, constantly-changing data, giving you daily updates on all aspects of your lifting equipment inventory via an online database accessed through a password-protected web portal.

Totally secure and extremely simple to use, **DATAHUB** brings new standards of efficiency to lifting equipment management.

# DATAHUB IN ACTION

# Is this equipment OK to use?

# When was it last inspected?

**DATAHUB** gives you all of the answers at a glance.

Fulfilling the numerous health and safety obligations associated with lifting equipment can be a daunting task. **DATAHUB** has been designed to make the job much, much easier.

At a glance, **DATAHUB** tells you what's due for inspection that day, that week, that month. It informs our engineers whether a piece of equipment needs LOLER or PUWER examination and then automatically generates the right documents.

It tells you all of the jobs that need to be done and then makes sure inspections are completed on time. With **DATAHUB** you can be certain that you meet your lifting equipment legal obligations.

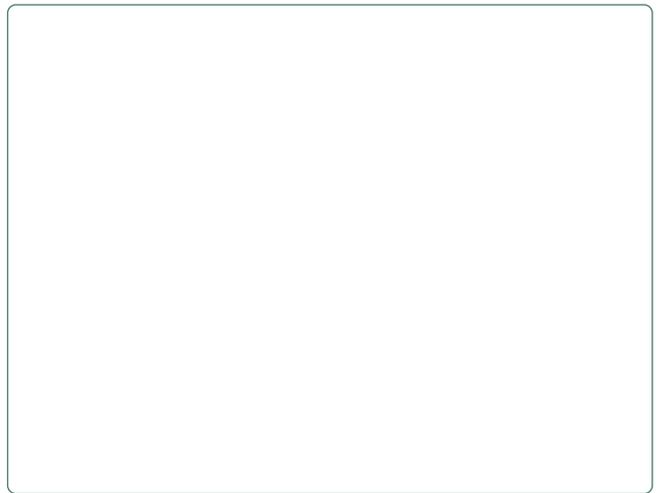

In addition, before any work starts **DATAHUB** ensures the engineer completes a method statement and risk assessment, which it then automatically emails to the client.

No other system is so thorough or so easy to operate.

# Incorporate unique RFID chips for even greater efficiency

**DATAHUB** gives you the option of having a unique RFID chip attached to every piece of on-site lifting equipment. Each chip has a readable number that can be accessed by our engineers using a PDA.

The combination of RFID chips and **DATAHUB**'s online database will give you unparalleled identification, tracking, cross-referencing and traceability.

# The complete picture

**DATAHUB** gives you the easiest, quickest access to all of your vital lifting equipment records 24/7, improving efficiency, speeding up procedures and keeping you totally informed at all times.

**WORK UNDERTAKEN**  
**COSTS**  
**REPORTS**  
**CERTIFICATES**  
**MAINTENANCE SHEETS**  
**SITE RECORDS**  
**RISK ASSESSMENTS**  
**DOCUMENTATION**  
**TRACEABILITY**  
**PERMITS**  
**INVOICE BREAKDOWNS**

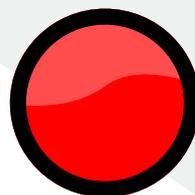

## Goodbye paperwork

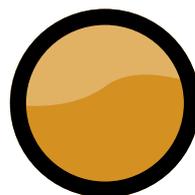

With everything stored electronically by Granada engineers using PDAs, **DATAHUB** means no paperwork, which is good for both the environment and traceability. Electronic storage also means that documents can't be lost.

## At-a-glance colour coding

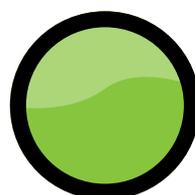

**DATAHUB** gives you the precise status of every single piece of lifting equipment. Because you know exactly when inspections will take place, you can plan ahead much more effectively.

**PROBLEM NEEDS ADDRESSING**

**INSPECTION DUE SHORTLY BUT OK IN THE SHORT TERM**

**CARRY ON**

## DATAHUB in a nutshell

- > Online database accessed through a password protected web portal
- > Automatically updated every 24 hours
- > Option of attaching unique RFID chips to all on-site lifting equipment for even greater efficiency
- > **DATAHUB** automatically raises a task and gives it a contract number, which it sends to the engineer
- > Provides data on all on-site lifting equipment
- > Lets you quickly find and print documents such as reports, certificates, maintenance schedules, site time records, risk assessments, permits and invoice breakdowns. It also gives you traceability for ISO audits and lets you undertake reviews quickly and efficiently
- > Software generates reports
